Introduction

The main purpose of this report is to discuss briefly about the development of tasks that I was allocated under the **Web Design and Development: 4COSC011W** Coursework. Additionally, this report includes the approach taken, and explanations of how the required functionality was implemented during the development of the tasks.

In this group project, I had to work in a team of four members including myself. The names of the team members and their roles are listed below.

Student 1: Mahesh Malintha

- Presentation Page
- Buy products

Student 2: Sachin Lakshan

- Main Page & External CSS
- Query Form

Student 3: Tharuka Hirushan

- Quiz
- Student details

Student 4: Thilan Theekshana

- Diagram (SVG)
- Thumbnail Images

From the subjects that were given to us, we selected the main subject as '**Sports**' and then designed our web site to be relevant to an **e-commerce website that sells sports items**. Doing so, made the tasks allocated to the team members much clearer and easier to perform.

1. Technical Discussion

As described above, my tasks were to create the **Main Page** and the **Query Form** according to the task allocation. This brief discussion will explain approaches taken, and how the required functionalities were implemented in the Main page and Query Form.

1.1 Main page

This section will mainly describe the development of tasks under Main page and techniques that were used to achieve the required functionality.

1.1.1 UI Design

UI design of the main page is critical when creating an ecommerce website. Good ecommerce main web page design is all about using the right colors, fonts, images, words and graphics to convince visitors to make a purchase. The UI design of the main page is mainly focused to attract potential customers and provide great user experience. Here, are some basic techniques that are used in the UI design.

- High Focus is given to branding (This includes the color palette, typography, overall theme and style that is used in marketing materials, on website)
- Use high-quality images
- Set clear and easy navigation
- Use social proof (Customer Reviews)
- Make it responsive

(See Appendix B: Screenshots)

1.1.2 Layout

The Layout of the main page consists three main areas.

1. Header area – Navigation bar, Showcase area
2. Body area – (Featured Products section, Latest Products section, Exclusive products Section, Customer Reviews section and Brands section)
3. Footer

(See Appendix B: Screenshots)

In some scenarios, CSS3 FlexBox is used as an approach to layout creation and alignment of elements because laying out elements is much easier and can easily build responsive websites with CSS3 Flexbox layout mode.

Figure 1 - FlexBox Layout Method

```
.featured-products-row,  
.latest-products-row1,  
.latest-products-row2,  
.exclusive-products-row,  
.reviews-row,  
.brands-row,  
.f-row {  
  display: flex;  
}
```

Media queries are used as a technique to make the website layout renders well for different-sized screens and viewports (responsive).

Figure 2 - Using Media Queries

```
/*-----Responsive(Meida Queries)-----*/  
@media (max-width: 768px) {  
  .navbar {  
    flex-direction: column;  
    height: 120px;  
    padding: 20px;  
  }  
}
```

1.1.3 Typography

As mentioned earlier, the text arrangement and the aesthetic look of fonts are among the top priorities for an e-commerce website. That is because choosing the right font has a huge impact on how the users experience the website.

For this website, 'Open Sans' which is one of the most popular fonts on the Google Font service is used as main font of the text to generate an aesthetic look in terms of typography.

Figure 3 - Using Google Fonts

```
@import url("https://fonts.googleapis.com/css2?family=Open+Sans:wght@300;400;800&display=swap");
```

```
body {  
  font-family: "Open Sans", sans-serif;  
  background: #fff;  
  color: #333;  
  line-height: 1.6;  
}
```

Here, a generic font family (sans-serif) is used as a fallback font to avoid unexpected behaviors.

1.1.4 Images

High quality images are used (See Appendix B: Screenshots) in the main page to display what are the products that sells on this ecommerce site. Additionally, the most common image file types (.jpg, .png etc.) are used to ensure that images are supported in all browsers (Chrome, Edge, Firefox, Safari, Opera).

'Font Awesome Icons' are used to display the rating stars under the products because of the flexibility of styling available.

Figure 4 - Images and Font Awesome icons

```
<div class="item">
  
  <h4>NIKE FOOTBALL BOOTS</h4>
  <div class="rating-stars">
    <i class="fas fa-star"></i>
    <i class="fas fa-star"></i>
    <i class="fas fa-star"></i>
    <i class="fas fa-star"></i>
    <i class="fas fa-star-half"></i>
  </div>
  <p>$37.65</p>
</div>
```

1.1.5 Search Engine Optimization

Semantic HTML elements are used (Ex. <header>, <nav>, <main>, <footer>, <section>) in the main page in order to make the web page more informative and adaptable, allowing browsers and search engines to better interpret content.

Additionally, the <title>, <meta>, <h1> and tags are created according to Google guidelines and best practices in SEO.

Figure 5 - Use of semantic HTML elements

```
<header>
  <div id="navbar" class="navbar">
    <h1 class="logo"><span class="text-primary">GEAR</span>-UP</h1>
    <nav>
      <ul>
        <li><a href="#home">Home</a></li>
        <li><a href="#home">Products</a></li>
        <li><a href="#home">About</a></li>
        <li><a href="contact.html" target="_blank">Contact</a></li>
        <li><a href="#home">Account</a></li>
      </ul>
    </nav>
  </div>
```

1.2 Query Form

This section will mainly describe the development of tasks under Contact-us page (Query Form) and techniques that were used to achieve the required functionality.

1.2.1 UI Design

Forms are an important aspect of an e-commerce website because forms can engage with customers online and can sometimes they can be a customer's first impression of the business. A well-designed form lets e-commerce businesses to gather information from customers while presenting them with a positive user experience.

Therefore, the user interface (UI) of this query form is designed so as to maximize the positive user experience (See Appendix B: Screenshots). Here are some of the UI design techniques which are implemented in this query form to enhance user experience.

- ✓ Use a simple layout which allows customers to easily progress from one form field to another with their Tab button rather than manually moving the mouse and clicking each field
- ✓ Query form layout renders well for different-sized screens and viewports

In some scenarios, CSS3 FlexBox and Grid is used as an approach to layout creation and alignment of elements because laying out elements is much easier and can easily build responsive websites

1.2.2 Form Validation

Before submitting data in the query form to the server, it is important to ensure all required form controls are filled out, in the correct format. This is called client-side form validation, and helps ensure data submitted matches the requirements set forth in the various form controls. Basically, there are two different types of client-side form validation.

1. Built-in form validation - uses HTML5 form validation features
2. JavaScript form validation - is coded using JavaScript.

JavaScript form validation technique is used here in the query form because the validation process is completely customizable.

1.2.3 Submitting the Form

Since I do not have a proper understanding of server side technologies yet, I used <https://formspree.io/> as the backend for this query form.

Formspree is basically a form backend, API, and email service for HTML & JavaScript forms. It's a very simple way to submit custom contact us forms, order forms etc.

2. Janet

Janet is the name given to an electronic communications network and associated electronic communications networking services and facilities that support the requirements of the UK education and research communities. Organisations in the UK education and research communities use Janet to fulfil, and to undertake activities supporting, their missions of providing education, research, and business and community engagement.

This website is completely in compliance with the conditions set out in the janet's Acceptable Use Policy document. Because, this website is not used for any activity that may reasonably be regarded as unlawful or potentially so. For example, this website not includes;

- creation or transmission, or causing the transmission, of any offensive, obscene or indecent images, data or other material, or any data capable of being resolved into obscene or indecent images or material.
- creation or transmission of material with the intent to cause annoyance, inconvenience or needless anxiety
- creation or transmission of material with the intent to defraud.
- creation or transmission of defamatory material.
- creation or transmission of material such that this infringes the copyright of another person.

Appendix C: Individual Statement

Student Name:	G.P Sachin Lakshan	Student Id:	20200603/w1833545
State what tasks you carried out in the project.			
<ul style="list-style-type: none"> ▪ Design & Development of the Main Page. ▪ Design & Development of the Contact-us page including Query Form ▪ Query form validation using JavaScript. 			
State what you enjoyed and did not enjoy about teamwork.			
<ul style="list-style-type: none"> ▪ Sharing the workload reduced the stress level. ▪ Working together facilitated the idea generation and creativity ▪ Teamwork improved the productivity ▪ Collaborative teamwork is little bit challenging in socially distanced and virtual contexts. (Due to COVID-19) 			
State what you learnt about teamwork.			
<p>Teamwork unites people together and motivates them to rely on one another to get things done. Teamwork also makes progress easier and allows the group to overcome obstacles that would have impeded an individual.</p>			
State what skills you gained/learnt from undertaking the project.			
<p>Gain a fundamental knowledge about;</p> <ul style="list-style-type: none"> ▪ How to create several linked HTML documents, following certain style guidelines and satisfying a simple specification. ▪ How to use JavaScript to create interactive documents. ▪ How to work in a group, with each individual having a distinct role and tasks. 			
State any strengths about yourself that emerged whilst undertaking the project.			
<ul style="list-style-type: none"> ▪ Leadership ▪ Collaboration ▪ Problem-solving ▪ Time management 			
State any weaknesses about yourself that emerged whilst undertaking the project.			
<ul style="list-style-type: none"> ▪ Sometimes got demotivated 			
State how you would do things better if you were to undertake the project again.			
<ul style="list-style-type: none"> ▪ Make sure to keep a close track of every team member's responsibilities and their performance using project management tools and software (Ex: MS Project) ▪ Make sure to evaluate the effectiveness of the project on daily basis.
